Assetfinder Cheat Sheet

by Simran Malakar

📖 What is Assetfinder?

Assetfinder is a fast subdomain discovery tool developed by Tomnomnom. It uses various public data sources to find domains related to a target.

🎯 Why is it Used?

- Quick subdomain discovery
- Very fast and lightweight
- Useful in automation pipelines
- Commonly used in bug bounty workflows

⚙️ How it Works

Assetfinder queries multiple OSINT sources such as APIs and public datasets to collect related domains and subdomains, then outputs them in a clean format.

💻 Installation

go install github.com/tomnomnom/assetfinder@latest

🔥 Common Commands (Pentester Usage)

```
assetfinder target.com

assetfinder --subs-only target.com

assetfinder target.com > subs.txt

assetfinder --subs-only target.com | sort -u

assetfinder --subs-only target.com | httpx

assetfinder --subs-only target.com | tee subs.txt | httpx -silent

echo target.com | assetfinder

cat domains.txt | assetfinder
```

⚡ Pro Tips (Real Pentester Use)

- Always use --subs-only to filter results

- Combine with Subfinder and Amass
- Pipe output to httpx for live host detection
- Merge results with sort -u to remove duplicates

🧠 Quick Workflow

assetfinder --subs-only target.com | tee subs.txt | httpx -silent -o live.txt

🔗 Pro Pipeline (Industry Level)

subfinder -d target.com -silent | \ assetfinder --subs-only target.com | \ amass enum passive -d target.com | \sort -u | \httpx -silent
