Subfinder Cheat Sheet

by Simran Malakar

📖 What is Subfinder?

Fast passive subdomain enumeration tool by ProjectDiscovery.

🎯 Why is it Used?

Fast recon

Safe (passive)

Pipeline friendly

⚙️ How it Works

Uses OSINT sources

Aggregates and filters results

💻 Installation

sudo apt install subfinder

go install github.com/projectdiscovery/subfinder/v2/cmd/subfinder@latest

🔥 Commands

Basic Enumeration : `subfinder -d target.com`

Silent Mode (Clean Output): `subfinder -d target.com -silent`

Save Output: `subfinder -d target.com -o subdomains.txt`

Use Multiple Domains: `subfinder -dL domains.txt`

Use API Keys (More Results): `subfinder -d target.com -config config.yaml`

Filter Resolved Domains: `subfinder -d target.com -active`

Show Only Alive Domains (with httpx): `subfinder -d target.com -silent | httpx`

Use Specific Sources: `subfinder -d target.com -sources crtsh,virustotal`

Pro Tips

```
subfinder -d target.com -silent | \ tee subs.txt | \ httpx -
silent | \ tee live.txt
```

```
subfinder -d target.com -silent -o subs.txt
cat subs.txt | httpx -silent -o live.txt
```
